Amendments to the Claims

The following listing of claims will replace all prior versions, and listings, of claims in the present application:

Please cancel claim 12:

 (previously presented) A method for detecting an analyte by a redox reaction and a fluorimetric determination, comprising

contacting a sample containing the analyte with a detection reagent which contains a compound of the general formula (I) as a fluorimetric redox indicator:

$$(\mathbb{R}^3)_h$$
 \oplus (I)

wherein

 R^1 and R^2 are each independently selected from R, $(CH_2CH_2O)_mR$, COR, COOR and OCOR.

R³ in each case is independently selected from NO₂, CN, R, OR, OCOR, COOR, SR and halogen.

R is H or C₁-C₄ alkyl, where alkyl is optionally substituted with halogen, OR, SR, NR₂, COOR, CONR₂, SO₃R and salts thereof or/and PO(OR)₃ and salts thereof.

m is an integer from 1-20 and

n is 1, 2 or 3:

irradiating the sample with excitation light of a predetermined wavelength; and

Serial No. 10/771,872 Docket No. WP 21394 US

detecting the presence of the analyte based on the fluorescence emission light emitted by the sample.

- (previously presented) The method of claim 1, wherein R¹ and R² are a C₁-C₂ alkyl group substituted with OH.
- 3. (previously presented) The method of claim 1, wherein R3 is NOz.
- (previously presented) The method of claim 1, wherein the redox indicator (i) can directly accept electrons.
- (previously presented) The method of claim 1, wherein the redox indicator (I) can accept electrons via a mediator.
- (previously presented) The method of claim 5, wherein an oxidizable substance is detected as the analyte.
- (previously presented) The method of claim 6, wherein the detection reagent further comprises one or more enzymes for reducing or oxidizing the analyte and optionally a coenzyme.
- (previously presented) The method of claim 6, wherein glucose, lactate, alcohol, galactose, cholesterol, fructose, glycerol, pyruvate, creatinine, alanine, phenylalanine, leucine, triglycerides or HDL cholesterol are detected as analytes.
- (previously presented) The method of claim 6, wherein glucose is detected using glucose oxidase, glucose dye oxidoreductase or glucose dehydrogenase/diaphorase.

Serial No. 10/771,872 Docket No. WP 21394 US

10. (previously presented) The method of claim 5, wherein an enzyme catalysing a redox reaction or an enzyme whose reaction can be coupled to an oxidoreductase reaction is detected as the analyte.

11. (previously presented) The method of claim 10, wherein glutamate-oxalacetate transaminase (GOT), (AST), glutamate-pyruvate transaminase (GPT), alanine aminotransferase (ALT), lactate dehydrogenase (LDH) or creatine kinase (CK) are detected as analytes.

12-13. (canceled)
